

Engineering Services

Through our subsidiaries, Pure Technologies offers specialized engineering support in areas related to asset management, primarily in pipeline condition assessment. With over 60 years of combined experience, Openaka and Jason Consultants provide value-added expertise in assessing water and wastewater pipeline infrastructure.

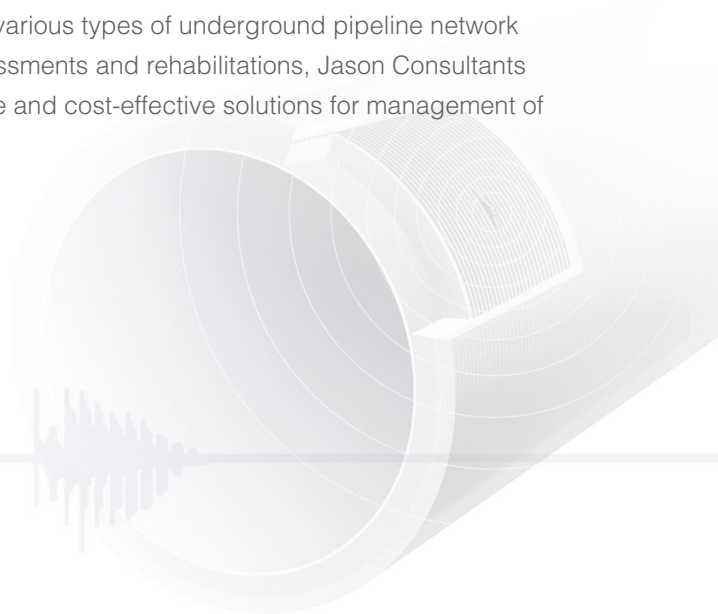

Openaka

Openaka specializes in providing comprehensive condition assessment information and management solutions for pipelines with a major focus on prestressed concrete cylinder pipes (PCCP). The firm provides decision support services for assessing, repairing and managing pipelines, and designs various repair techniques with the goal of providing cost-effective client solutions.

Jason Consultants Ltd.

Jason Consultants is a specialist consultancy focused on underground infrastructure engineering and technology. Through specialized expertise and depth of experience with various types of underground pipeline network inspections, evaluations, assessments and rehabilitations, Jason Consultants provides clients with innovative and cost-effective solutions for management of existing underground pipes.
